

CPTED

Crime Prevention Through Environmental Design

Examples of Natural Surveillance

- Limit the use of window vision restrictors such as potted plants, draperies, signage, landscaping, public art, and reflective window treatments.
- Design interior shelf height in retail and commercial uses to no more than five feet.
- Utilize peepholes and vision panels in management offices and rear doors to provide surveillance and observation.
- Orient building and windows to provide maximum surveillance of exterior areas.
- Design parking lots to allow a high degree of observation from buildings and streets.
- Plan entryways that are visible to adjacent neighbors or passersby; not secluded alcoves.
